

ABSTRACT

Portable electronic equipment capable of changing the display on a display so that the display has text of a desired size, by a simple operation. The portable electronic equipment includes (a) a display
5 for displaying information, (b) a first manipulator for performing a first process on the information displayed on the display, (c) a second manipulator for performing a second screen process on the information by operation in a circumferential direction thereof, and (d) a controller. The controller controls the display according to the operation of the
10 first and second manipulator. Thereby, the controller can perform the first screen process of scrolling the screen in an arbitrary direction to select a display position and the second process of scaling up, scaling down, and switching the screen with the selected display position as a reference.
